Boone Acres

The City of San Ramon, a pristine east San Francisco Bay community, contracted with EcoFert in 2016 to assist in maintaining park turf grass in top notch condition while at the same to recover the health of precious redwood trees. Due to the confluence of extended drought conditions and application of reclaimed water, soil salts had risen to alarming levels. In conjunction with maintenance practices by Jeff Gault and his staff at the San Ramon Parks Department, EcoFert's combined Soil Fertility and Water Treatment Programs have been just what the doctor ordered to fulfill the City's goals of healthy and sustainable landscapes.
